Art Unit: 2823

The election of the first species is acknowledged. The characterization of the elected invention as proffered by applicant is agreed to thus rendering the traversal of the restriction moot.

Claims 1-7,20-27,35-38 and 45-50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Raaijmakers et al.

Raaijmakers et al discloses alternating monolayers of different metal oxides including forming a further dielectric layer on such a layer and including additional chemistries in each cycle [0055-0063]. The reference discloses different ratios different metals and binary cycles [0069]. The reference exemplifies formation of tantalum oxide and zirconium oxide [0072-0075][0106][0123-0124].

It would have been within the scope of one of ordinary skill in the art to form the recited alternating monolayers of tantalum oxide and zirconium oxide wherein the monolayers are evenly dispersed or dispersed as desired to produce a particular dielectric constant of the resulting dielectric layer in view of the disclosed suitability of tantalum containing and zirconium containing source gases as the metal source gases.
